

ABSTRACT OF THE DISCLOSURE

The invention provides a high-quality efficient print system of load diffusion type, capable of printing document data described with a structured description

5 language based on page concept.

A printing apparatus transmits, to a server, information for identifying the document data and physical layout information required for determining the layout of the document data, and the server converts the document
10 data into document data described with the structured description language capable of page layout based on the received information.
